

Comparing and Scaling

Jeter

EclipseCrossword.com

Across

- part divided by the whole times 100 (out of 100)
- the number a ratio is multiplied by to find an equivalent ratio
- compares an amount to one single unit (for example: 50 miles per hour, \$5 per t-shirt)
- a comparison of two different quantities (may be written 3 ways: 2 to 3, 2:3, 2/3)
- how much more one quantity is than another (subtract)
- a comparison of two different units
- an equation stating that two ratios are equal

Down

- the average number of people per unit area (for example per square mile)

- part divided by the whole
- part over the whole
- to values that are equal
